

“ BESPOKE PHILOSOPHY ”

Nowadays, the evolution of the market requires a different approach to the study, design, production and installation of a workshop. Dedicated service areas are no longer a closed zone, restricted to useful mechanical activities. The technical assistance service is a major asset for companies and contributes to increasing revenue alongside the retail business; promoting the sale of technical accessories, apparel and new models.

The new functions require the creation of areas capable of combining technical efficiency and the communication of company values. 3D Beta supports manufacturers and professionals in the automotive and motorcycle sector, on the path of **researching and implementing a solution** capable of concentrating these qualities.

DESIGNING A FUNCTIONAL WORKSHOP

3D BETA -
A BETA UTENSILI SPA
GROUP COMPANY - IS
A NEW COMPANY
DEDICATED TO
MODERN WORKSHOP
ARCHITECTURE

We specialise in the study, design, production and installation of furnishings. True “one-offs” or limited editions, objects dedicated to satisfying the imagination of collectors or complete the image of the affiliates of the top car and motorcycle manufacturers. We create high-end furnishings – aesthetic and functional – a fundamental element in the creation of environments that combine technical efficiency and the communication of the company’s core values.

BRAND IMAGE AND GUIDED QUALITY

A FUNCTIONAL
FURNISHINGS THAT
AID MECHANICAL
OPERATIONS
CREATE EFFICIENCY

At the same time, they convey the values of the brand to the end user, increasing the volume of turnover.

A single reference point charged with identifying the best-integrated solutions (furnishings, lifting equipment, systems, and tools) guarantees a uniform standard of quality and contained development times.

#FATTOAMANOINITALIA

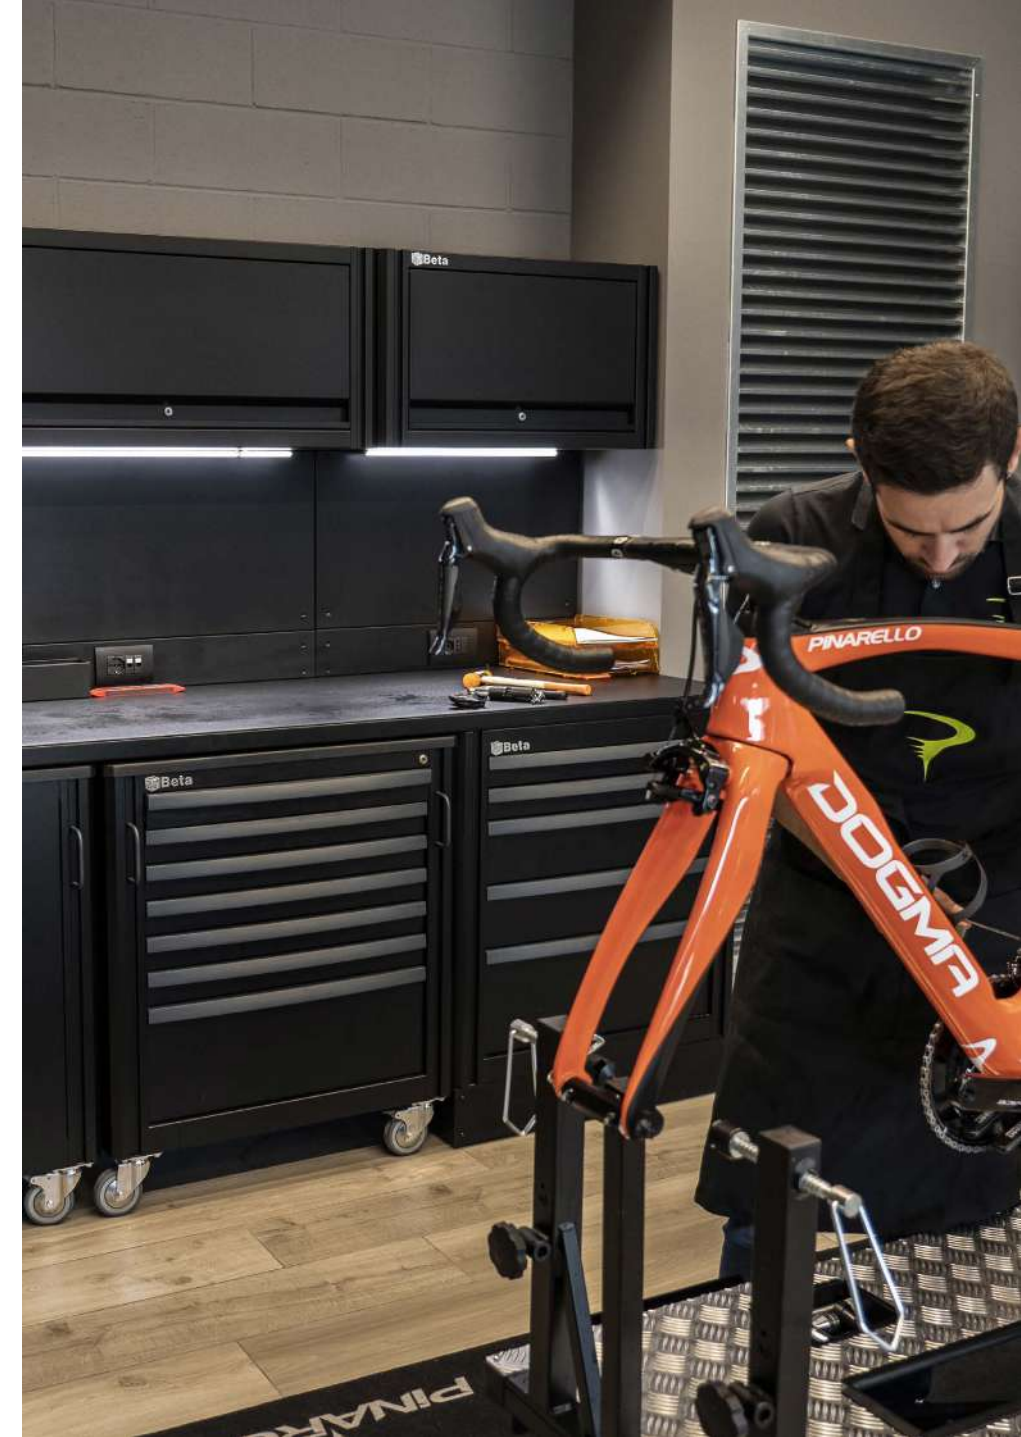

A single referent called to identify the best integrated solutions, ensures a high-quality standard and short development time.

Self-supporting frames contribute to limiting costs related to masonry and systems work. Furthermore, they allow the easy division of workspaces, without the need for plasterboard walls.
